

INTERMOUNTAIN WEST
JOINT VENTURE

PARTNERING TO CONSERVE SAGEBRUSH RANGELANDS

The American West is a patchwork of private and public lands, making it imperative that we work across ownership boundaries to ensure the vital resources that sustain wildlife, ranchers, and rural communities are productive and healthy. To achieve this, the Intermountain West Joint Venture has partnered with the Bureau of Land Management, state agencies, landowners, local organizations, and others to provide a model for effective and efficient collaborative landscape-scale conservation and management for sagebrush rangelands.

SAGEBRUSH PROGRAM TOOLBOX

REDUCE RANGELAND WILDFIRE & INVASIVE ANNUAL GRASSES

RESTORE & SUSTAIN WET MEADOWS & RIPARIAN HABITAT

REMOVE EXPANDING CONIFERS

PROMOTE OUTCOME-BASED GRAZING

PARTNER ON BIG GAME HABITAT CONSERVATION

THREE WORK STRATEGIES

Community-Based Field Capacity

We place rangelands professionals in communities that accelerate and coordinate projects and collaborate with partners to scale up management actions.

Science-to-Implementation

We strengthen understanding of and access to current science, research, data tools, and knowledge about conservation within the sagebrush biome.

Communications

We tell the story of conservation successes, struggles, and current events to targeted audiences.
